52. The Consultative Committee approved the following text for an FAQ on the benefits of new varieties of plants for society, as presented in document CC/95/7, paragraph 16, and recommended its adoption by the Council:

Feeding the World

New varieties of plants are an essential and sustainable means of achieving food security in the context of population growth and climate change. The availability of an increasing choice of healthy, tasty and nutritious food at affordable prices relies on new varieties that are adapted to the environment in which they are grown and which provide a viable income for farmers.

Improving lives in rural and urban areas

In rural areas, innovation in agriculture and horticulture is important for economic development, with production of high value varieties of fruit, vegetables and ornamentals providing increased income for farmers and employment for millions of people around the world. At a time of increasing urbanization, new varieties support the development of urban agriculture and the growing of ornamental plants, shrubs and trees that contribute to improving the urban environment.

Respecting the natural environment

Improved yield, more efficient use of nutrients, resistance to plant pests and diseases, salt and drought tolerance and better adaptation to climatic stress are some of the features that enable new varieties to increase productivity and product quality in agriculture, horticulture and forestry, whilst minimizing the pressure on the natural environment.

53. The Consultative Committee requested the Office of the Union to invite comments on the FAQ on the benefits of new varieties of plants for society, as presented in document CC/95/7, paragraph 16, by the end of November 2018.
